

Lisi Camboim

HIP V. HYPE SUSTAINABILITY
GRADUATE CONSULTANT
MOBILE +61 (0) 423 663 843
LISI@HIPVHYPE.COM

Lisi is passionate about designing buildings that promote both the wellbeing of people and the sustainability of the environment. Always inquisitive, Lisi is not afraid to question current standard practice to drive the pursuit of better buildings. She has come to recognise the impact of buildings on the way we live, work and play. As part of the Better Buildings team, Lisi helps develop integrated systems and technologies to create buildings that are more comfortable, have cleaner air, cost less to operate and are easier to use. She understands these aspects actively contribute to people's day-to-day experiences and health.

Lisi's experience as a sustainability consultant extends across a number of rating tools including Green Star, WELL, LEED and Passive House, with a focus on indoor environmental quality and energy performance. Using modelling tools to assess energy use, air quality, thermal comfort and daylight in buildings, Lisi seeks to provide multiple design scenarios to improve a building's overall performance.

Growing up in Brazil, Lisi developed an appreciation of and connection to nature and the impact of the natural environment on communities, particularly vulnerable communities. This appreciation influenced her decision to complete a Bachelor in Architecture and Urban Planning in Brazil, with a focus on passive design as a framework to designing buildings and cities that respond to their climate. Interested in extending beyond climate responsive design, Lisi sought to embed sustainability deeply into her practice, so she made the leap to Australia to complete a Masters in Energy Efficient and Sustainable Buildings. During her studies Lisi developed technical and conceptual skills in building physics and sustainable design strategies. Her expertise covers sustainable building design and technology, energy efficiency in buildings and project management.

In recent years, meditation has become central to Lisi's lifestyle as a way to disconnect from the day-to-day rush and reconnect to her inner self. Lisi is an avid traveller, she loves exploring new cities and immersing herself in different cultures and ways of living. These experiences expand her perspective on what really matters, after all, there is always another way to look at solving the same problem.

Formal Qualifications

-
- BACHELOR IN ARCHITECTURE AND URBAN PLANNING IN BRAZIL, UNIVERSITY OF FORTALEZA
 - MASTERS IN ENERGY EFFICIENT AND SUSTAINABLE BUILDINGS, RMIT UNIVERSITY
-
