VISION

At HIP V. HYPE, sustainability is inherent to everything we do, striving to deliver ambitious yet commercially grounded sustainable solutions.

We aim to lead by example, delivering projects with strong sustainability outcomes, providing advice to governments, institutions and organisations to accelerate action, and enabling spaces that bring together those looking to create the future we deserve.

OUR COMMITMENT

Our natural systems are out of balance meaning that economic and social prosperity are no longer a given. We are committed to making decisions that seek to restore the balance as rapid climate change directly impacts the projects we deliver and the advice we provide. The action we take as a business is more important than ever.

We recognise the climate emergency and are genuinely committed to challenging ourselves to explore innovative solutions that enable exceptional sustainability outcomes.

OBJECTIVES

We are committed to embedding sustainability in our work, including:

- Minimising risks of harm to human health or the environment from pollution or waste, so far as reasonably practicable
- Minimising our operational footprint by actively maintaining Climate Active Carbon Neutral Certification for HIP V. HYPE Sustainability Pty Ltd
- Continually improving our performance by setting measurable environmental targets
- Encouraging and supporting Our People, our Collective and beyond to reduce their footprint and make positive change
- Providing Our People with a Bicycle Network Membership to support Our People to use active transport alternatives
- Minimising the footprint of our Projects by undertaking a calculation of the total carbon account (embodied and operational) for all our new Projects in accordance with the Climate Active Carbon Neutral Standard
- Proactively working with waste contractors to recycle at least 90% of all demolition and construction waste
- Seeking to purchase products that are highly recyclable and contain recycled content
- Proactively seeking partners that align with our values and commitment to create the better future we all deserve, and actively communicate the value of our position to those who don't
- Undertaking and reporting on as-built monitoring to test the sustainability outcomes of our Projects
- Complying with all legislative requirements
- Ensuring management are committed to the effective implementation of ISO 14001
- Reviewing our processes and aligning the way we work with ISO 14001 - Environmental Management

APPLICATION

This policy applies to all our operations, including the projects we deliver, the advice we provide, the workshare spaces that we enable, and the events we run internally and externally. Our People and the people who use our workshare spaces are encouraged to uphold the objectives under this policy.
